

Internship day 01 documentation:

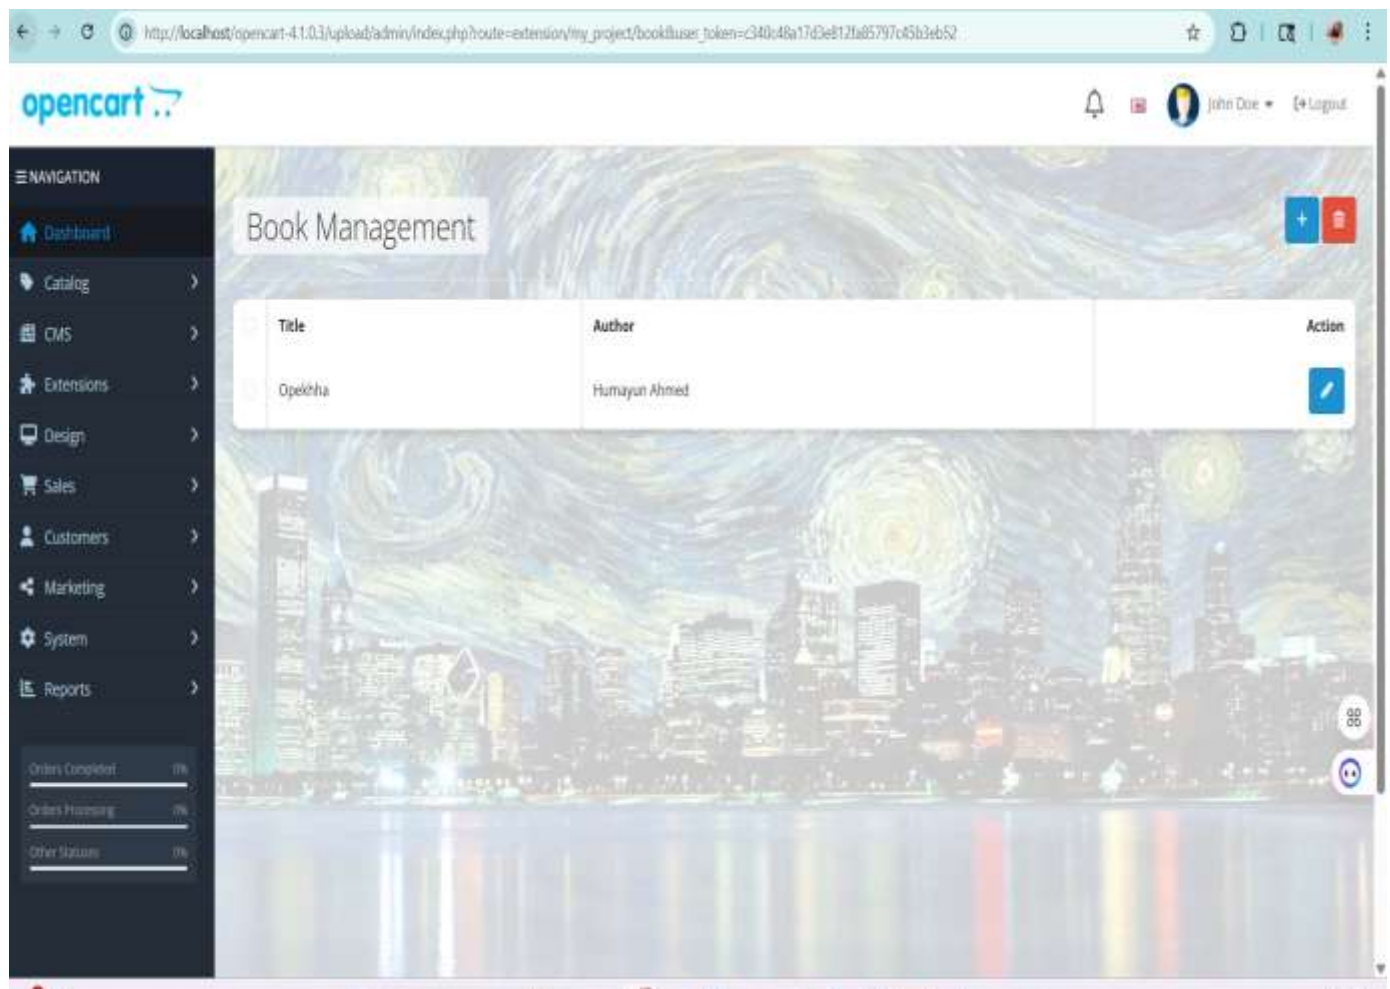

1. Install opencart from :
url: <https://opencart4.com/download-opencart>
2. Install xampp from:
url: <https://www.apachefriends.org/download.html>
3. Extract zip file of opencart to -> htdoc folder of xampp

Task:

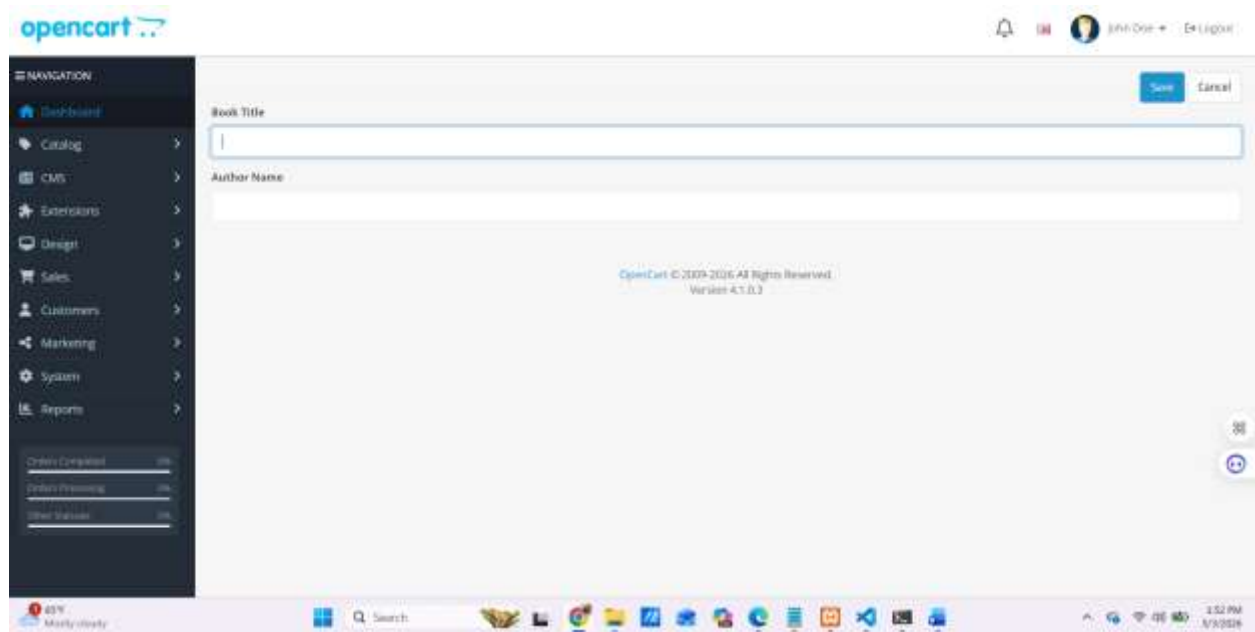

Practice and know about opencart using CRUD operation

Final result:

Page 1:

Page 2:

type url in browser :

localhost/opencart-4.1.0.3/upload/admin

Enter and give

User name: Oishy

password: 123

Controller: admin/controller/extension/my_project/book.php

Model: admin/model/extension/my_project/book.php

View (Twig): admin/view/template/extension/my_project/book.twig

step 1: Create controller (Controller)

path: admin/controller/extension/my_project/book.php

Code:

```
<?php

namespace Opencart\Admin\Controller\Extension\MyProject;

class Book extends \Opencart\System\Engine\Controller {

    public function index(): void {

        $this->load->language('extension/my_project/book');

        $this->document->setTitle($this->language->get('heading_title'));

        $this->load->model('extension/my_project/book');

        $data['books'] = $this->model_extension_my_project_book->getBooks();

        $data['user_token'] = $this->session->data['user_token'];

        $data['header'] = $this->load->controller('common/header');

        $data['column_left'] = $this->load->controller('common/column_left');

        $data['footer'] = $this->load->controller('common/footer');

        $this->response->setOutput($this->load->view('extension/my_project/book', $data));

    }

}
```

Step 2: Create (Model)

path: admin/model/extension/my_project/book.php

```
<?php
namespace Opencart\Admin\Model\Extension\MyProject;

class Book extends \Opencart\System\Engine\Model {
    public function getBooks() {
        $query = $this->db->query("SELECT * FROM " . DB_PREFIX . "test_book");
        return $query->rows;
    }

    public function addBook($data) {
        $this->db->query("INSERT INTO " . DB_PREFIX . "test_book SET title = '" . $this->db->
        >escape($data['title']) . "', author = '" . $this->db->escape($data['author']) . "'");
    }
}
```

step 3: (View/Twig)

path: admin/view/template/extension/my_project/book.twig

```
{{ header }}{{ column_left }}
<div id="content">
    <div class="page-header">
        <div class="container-fluid">
            <h1>Book Management</h1>
        </div>
```

</div>

<div class="container-fluid">

<table class="table table-bordered">

<thead>

<tr>

<th>Title</th>

<th>Author</th>

</tr>

</thead>

<tbody>

{% for book in books %}

<tr>

<td>{{ book.title }}</td>

<td>{{ book.author }}</td>

</tr>

{% endfor %}

</tbody>

</table>

</div>

</div>

{{ footer }}

Database:

```
Command Prompt - mysql -u x + v
