Course Title: Industrial Training

Course Code: ICE-3211

Submitted by

Name: MST. Labonno Rahman Oishy

Walton ID: IA-540

Date: 04-05-26

Task 1:

To create table data and analyze the Walton OpenCart extension modules, I must understand how the backend status affects the frontend functionality. Walton's system is highly customized to prioritize technical data and logistics over standard retail features.

My comparison Sheet Link:

https://github.com/13Labonno/Internship/blob/main/OpenCart_Modules_List.xlsx

Table output:

The screenshot shows an Excel spreadsheet titled 'OpenCart_Modules_List.xlsx'. The spreadsheet has three columns: 'Module Name', 'Status', and 'Description'. The rows list various modules, their status (Enabled or Disabled), and a brief description of their functionality. The status is color-coded: green for 'Enabled' and red for 'Disabled'.

	A	B	C
	Module Name	Status	Description
1	Magic Zoom™	Enabled	Image Zooming Functionality
2	Blog Module: Settings	Enabled	Dreamvention - Blog Configuration
3	Blog module: Category	Enabled	Dreamvention - Blog Categories
4	Blog module: Date	Enabled	Dreamvention - Blog Date display
5	Blog module: Featured Posts	Disabled	Dreamvention - Featured blog posts
6	Featured Posts (Sub)	Enabled	Sub-instance of Featured Posts
7	Blog module: Latest Posts	Disabled	Dreamvention - Recent blog posts
8	Latest Posts (Sub)	Enabled	Sub-instance of Latest Posts
9	Blog module: Popular Posts	Disabled	Dreamvention - Trending blog posts
10	Blog module: Related Post To Product	Disabled	Dreamvention - Cross-link blog & products
11	Blog module: Related Post	Enabled	Dreamvention - Shows related blog entries
12	Blog module: Related Product	Disabled	Dreamvention - Product links in blogs
13	Blog module: Search	Enabled	Dreamvention - Blog search functionality
14	Blog module: Tags	Disabled	Dreamvention - Blog tagging system
15	Event Manager	Disabled	Dreamvention - Event management
16	Export/Import	Disabled	Dreamvention - Data management
17	SEO Module Blog	Enabled	Dreamvention - SEO for blog content
18	SEO Module	Disabled	Dreamvention - General SEO tools
19	Shopunity	Disabled	Dreamvention - Extension management portal
20	Translit	Disabled	Dreamvention - URL transliteration
21	Digitcart Unlimited Product Extra Tabs 3.0	Enabled	Custom product tabs
22	Sainent Extensions	Disabled	Core library for Sainent extensions
23	Account	Enabled	Customer account side menu
24	Banner	Disabled	Banner core module
25	Ceiling ac banner (Sub)	Enabled	Specific banner for AC
26	HVAC Banner (Sub)	Enabled	Specific banner for HVAC

	A	B	C
27	HVAC Banner (Sub)	Enabled	Specific banner for HVAC
28	Split AC Banner (Sub)	Enabled	Specific banner for Split AC
29	Bestsellers	Disabled	Displays top selling products
30	Carousel	Disabled	Brand/Image slider carousel
31	Category	Enabled	Category side menu/listing
32	Divido Product Page Calculator	Disabled	Finance calculator for products
33	Featured	Disabled	Product showcase core module
34	Ceiling ac (Sub)	Enabled	Featured list for Ceiling AC
35	Home Page (Sub)	Enabled	Featured list for Home Page
36	Industrial HVAC (Sub)	Enabled	Featured list for Industrial HVAC
37	Split AC (Sub)	Enabled	Featured list for Split AC
38	Filter	Enabled	Product filtering system
39	Google Hangouts	Disabled	Live chat integration
40	HTML Content	Disabled	Custom static HTML blocks
41	1st Block to 8th Block (Sub-instances)	Enabled	Various landing page content blocks
42	AC Video Section (Sub)	Enabled	HTML block for video
43	AC-Landing-Page-Html (Sub)	Enabled	Landing page structure
44	Information	Disabled	Information page links
45	Klarna Checkout	Disabled	Payment gateway integration
46	Latest	Disabled	New product display
47	Lay-Buy Layout	Disabled	Payment layout module
48	Log In with PayPal	Disabled	Social login integration
49	Login with Amazon	Disabled	Social login integration
50	Pay with Amazon	Disabled	Payment method integration
51	PayPal (Powered by Braintree) Button	Disabled	Payment checkout button
52	PayPal Express Checkout Button	Disabled	Quick payment button
53	Pilibaba Checkout Button	Disabled	Chinese payment solution
	A	B	C
39	Google Hangouts	Disabled	Live chat integration
40	HTML Content	Disabled	Custom static HTML blocks
41	1st Block to 8th Block (Sub-instances)	Enabled	Various landing page content blocks
42	AC Video Section (Sub)	Enabled	HTML block for video
43	AC-Landing-Page-Html (Sub)	Enabled	Landing page structure
44	Information	Disabled	Information page links
45	Klarna Checkout	Disabled	Payment gateway integration
46	Latest	Disabled	New product display
47	Lay-Buy Layout	Disabled	Payment layout module
48	Log In with PayPal	Disabled	Social login integration

50	Pay with Amazon	Disabled	Payment method integration
51	PayPal (Powered by Braintree) Button	Disabled	Payment checkout button
52	PayPal Express Checkout Button	Disabled	Quick payment button
53	Pilibaba Checkout Button	Disabled	Chinese payment solution
54	Product Option Color Image	Enabled	Visual options for products
55	Sagepay Direct Card Management	Disabled	Payment management
56	Sagepay Server Card Management	Disabled	Payment management
57	Slideshow	Disabled	Main homepage slideshow
58	Category Page Slide (Sub)	Enabled	Specific slide for categories
59	Specials	Disabled	Discounted product display
60	Store	Disabled	Store selection module
61	eBay Listing	Disabled	Integration with eBay Marketplace
62			

Task 2:

Add a new product on opcart ,Then:

Comparing my personal OpenCart setup to the Walton implementation reveals a shift from a standard retail design to a highly customized, data-driven enterprise layout.

That's my opencart:

This one is walton's that I added:

Design and Layout Comparison

Feature	My OpenCart Setup	Walton Custom Implementation
Visual Focus	Image-Centric: High-resolution product imagery takes up the primary left column.	Data-Centric: Minimalist imagery with a focus on structured status tables and dates.
Header/Nav	Standard E-commerce: Large search bar and category-driven top navigation menu.	Corporate Portal: Simplified navigation with links to "Walton Plaza" and "Support".
Product Tabs	Standard: Basic "Description" and "Reviews" tabs.	Extended: Multiple technical tabs including "Specs," "ETA History," and "Picture Gallery".
Call to Action	Direct Purchase: Standard "Add to Cart" button with quantity selector.	Distribution-Focused: Buttons for "Buy From Distributor" and "Buy From Plaza".

Extension Gap Analysis

Based on the Walton module list, here is which extensions are driving their specific design choices and what mine would need to replicate them:

1. Interactive Product Display

Extension Needed: Magic Zoom™

Purpose: Walton uses this to allow users to hover over product images for high-detail inspection, which is critical for technical products like fans.

2. Advanced Product Information

Extension Needed: Digitcart Unlimited Product Extra Tabs 3.0

Purpose: This is why Walton can show "ETA History" and "Technical Specifications" separately. Your current setup only shows the standard description box.

Extension Needed: Product Option Color Image

Purpose: If the fan comes in different finishes (e.g., wood vs. metal), this extension allows Walton to show a small image thumbnail next to the selection instead of just text.

3. Content and Marketing Hierarchy

Extension Needed: HTML Content (Sub-instances 1st through 8th Block)

Purpose: Walton uses these to build custom landing pages for specific product lines (like AC or HVAC) rather than relying on the default OpenCart category layout.

Extension Needed: Dreamvention Blog Module (Category, Date, Search, SEO)

Purpose: This drives the "Blog" link in their header. It helps with SEO and provides "How-to & Tips" content to support the technical product line.

4. Navigation and Filtering

Extension Needed: Filter and Category (Enabled)

Purpose: While mine have basic categories, Walton uses enabled side-menu account and category modules to keep the interface looking like a professional portal rather than a simple shop.

Walton's edit option section:

Mine edit option section:

Extension & Backend Comparison

Feature	Admin Panel (Mine)	Walton Admin Panel	Extension Required
Product Tracking	Standard product name and model display.	Detailed tracking: "Last Update" timestamp and "Updated By" user info.	Custom Modification / Admin Audit Log: Tracks which staff member modified a specific product.
Visibility	Standard column layout (Image, Name, Model, Price, Qty).	Added Product ID column for quick database reference.	Admin Column Manager: Allows adding internal IDs directly to the list view.
Status Management	Requires clicking "Edit" to see or change status.	Visible Status (Enabled) column directly in the main list.	Admin List Status Toggle: Useful for quickly enabling/disabling products during testing.
Data Filtering	Standard sidebar filter	Likely utilizes the Export/Import module (listed	Export/Import Tool: Critical for managing thousands of

Feature	Admin Panel (Mine)	Walton Admin Panel	Extension Required
	(Name, Model, Price, etc.).	as disabled in your list but common in Walton setups) for bulk data management.	SKUs like Walton's fan and AC lines.

Which Extension Is Needed For What?

Based on the differences in the Walton, I would need the following types of extensions to match their functionality:

1. For the "Last Updated By" Info

The Need: Walton is a large organization where multiple employees (like **Humayun Kabir**, seen in your earlier screenshot) manage products.

Extension Type: Admin Activity Tracker or Product Edit History. This adds the database hook to record the \$user_id and \$date_modified directly in the product list template.

2. For Product ID Visibility

The Need: To quickly sync the web store with an internal ERP or warehouse system.

Extension Type: Admin Product List Extra Columns. This allows to pull the product_id from the SQL table and display it in the product_list.twig or .tpl file without opening each item.

3. For Complex Product Content

The Need: To handle the "ETA History" and "Technical Specs" tabs seen in Walton's frontend.

Extension Type: Digitcart Unlimited Product Extra Tabs. In the backend, this adds a new tab to the product edit page where you can input custom HTML or technical tables that don't fit in the standard description box.

4. For SEO and Product Discovery

The Need: Managing metadata for a massive catalog.

Extension Type: SEO Module Blog. While my setup is focused on the product, Walton uses this to link product pages to "How-to & Tips" articles, driving more organic traffic to technical items like the **Gloria Fan**.
